What to do next?

- On Cisco
 - "ip options ignore" command
- On Juniper
 - "allow-ip-options 26"
- Router not listed here
 - Send command to sam@enhancedip.org
- Tweet @EnhancedIP with router IP and whether or not you've enabled IP option 26.
- <http://www.enhancedip.org/docs/router-references>

What to do next?

- Will these commands cause the packets with IP options to be forwarded in the fast path or slow path?
- On Cisco, it appears as though "ip options ignore" will cause options packets to flow via the fast path. On Juniper we are not certain.
- If you know, email sam@enhancedip.org or tweet @EnhancedIP
